Q1 Steps to convert an excel sheet into data file acceptable by Weka software.

Ans **Save Excel as CSV**

Open your Excel file.

Go to File > Save As.

Choose CSV (Comma delimited) (*.csv) as the file format, then save.

2. Load CSV into Weka (using Weka's ARFF Viewer)

Open Weka and go to Tools > ArffViewer.

In the ARFF Viewer, click File > Open, and select your saved CSV file.

Ensure that the CSV loads correctly with headers as attributes.

3. Convert CSV to ARFF Format

Once the CSV is loaded, go to File > Save as and select ARFF as the file format.

Save this file, which will now have a .arff extension, making it Weka-compatible.

4. Edit ARFF Attributes

In Weka's ARFF Viewer, you can manually edit the attribute types or values if needed.

Ensure the format is compatible with Weka's data requirements, especially for numeric, nominal, or string attributes.
